phase 1, or the warning phase, includes vague anxiety, depression, and apathy

my doctors found me a fertility center that was a little over an hour away (in Jupiter Florida of all places) where they would draw my blood and give me the scripts that I needed

then I'd come home and instantly sit in front of my home computer and start drawing, exhausting that same finger."

would be the most useful clinical attribute in a new PPI or, for that matter, in a new therapy for reflux-related
